

CASE STUDY OF:

NV FLIX APP

Portfolio Page

Overview

NV Flix App is a web application developed using the MERN stack. Users can create personal accounts to view a variety of movies, each with detailed information about its director, genre, and synopsis. Additionally, users can update their personal information and create a list of favorite movies.

Purpose

This project was developed as part of my coursework at CareerFoundry to strengthen my skills in JavaScript and React. It involved building a full-stack web application using the MERN stack, allowing me to work with MongoDB, Express.js, React, and Node.js. Through this project, I gained practical experience in managing state, handling API requests, and developing user-friendly interfaces.

Objectives

Create Back-End

Develop a server using Node.js and Express, with a MongoDB database to handle user data and movie information.

Create Front-End

Build a responsive user interface using React, enabling users to interact with the application, view movies, and manage personal accounts.

Deploy App

Deploy the full-stack application on a cloud platform, ensuring accessibility and smooth performance for all users.

Server-Side

TECHNOLOGY STACK

- Node.js and Express.js: Utilized for building a robust and scalable server environment.
- MongoDB: Chosen for its flexibility and performance in managing movie data and user information.

FUNCTIONALITY

- API Endpoints: Manages user authentication, movie data retrieval, and updates.
- Data Management: Supports CRUD operations to efficiently handle and store data.
- Security: Incorporates middleware for secure data transactions and user authentication.

DEPLOYMENT

- Cloud Platform: Deployed on a cloud service for reliable performance and scalability.
- Scalability: Configured to accommodate increasing user demands and traffic.

Client-Side

TECHNOLOGY STACK

- React.js: Framework used to build a dynamic and responsive user interface.
- Responsive Design: Ensures compatibility across various devices and screen sizes.

FUNCTIONALITY

- Interactive Components: Features include movie listings, user profiles, and favorites management.
- State Management: React's built-in state management for real-time updates and interactions.
- API Integration: Connects seamlessly with server-side endpoints to fetch and display data.

DESIGN

- User Experience: Focuses on intuitive navigation and modern aesthetics.
- Responsive Layout: Adapts to different devices for a consistent user experience.

Page Views

Profile View

The profile view displays the user's information and favorite movies. Users have the ability to add or remove movies from their favorites and can also delete their account if they wish to.

Main View

The main view shows all the available movies and includes a search function to find movies by title. Users can add movies to their favorites and remove them as needed.

Movie View

The movie view presents the movie's synopsis, genre, director, and the director's bio. It also indicates whether the movie is featured.

Addressing Obstacles and Implementing Solutions

Challenges Faced

- Infinite loop requests to the API.
- Signup process resulting in bad requests and 404 errors.
- Unnecessary fetching of movies leading to performance issues.
- Navigation and route issues resulting in 404 errors.

Solutions Implemented

- Conducted a thorough code review to identify and rectify dependencies causing the loop.
- Debugged and corrected the signup component, ensuring proper data transmission to the server.
- Restructured the code, optimizing movie fetching to ensure data is only retrieved when needed.
- Reviewed and corrected navigation components and route configurations for a smooth user experience.

Future Improvements

- Expand the library to include a broader selection of movies, enhancing user choice and engagement.
- Incorporate movie posters to provide a more visually appealing interface and improve user experience by making it easier to identify and select movies.
- Refine the overall app design for improved aesthetics, usability, and user navigation.
- Allow users to rate and review movies, adding a community-driven element and helping others make informed choices.

Quote

"Your website is the center of your digital eco-system, like a brick and mortar location, the experience matters once a customer enters, just as much as the perception they have of you before they walk through the door."

— Leland Dieno

My Team

I want to take this moment to thank both my mentor, Sarah, and my tutor, Dean, for all the help and guidance they have given me through this experience.
